Orange

QUICK START GUIDE · V0.1.6

Drag. Tap. Drop.

Orange turns any file into what you need, without leaving the folder you are in. Everything happens on your PC. Nothing is uploaded.

HOW IT WORKS

1

Drag a file

Pick up any file in File Explorer or on the desktop. Keep holding it.

2

Tap a key

While still holding, tap **Shift**, **Ctrl** or **Alt**. A wheel opens under your cursor.

3

Drop on a wedge

Release on what you want. The new file appears beside the original.

THREE KEYS, THREE WHEELS

`Shift`

Convert

Change a file into another format, such as HEIC to JPG or MP4 to MP3.

`Ctrl`

Tools

Compress, trim, crop, merge, split, redact and more.

`Alt`

Actions

Share, copy, move, copy path, or park the file on a shelf.

Good to know

- A small card appears when a job finishes. Use **Show in folder** or **Undo**.
- Your original is never overwritten or deleted.
- Many formats? Hover **MORE** to turn the wheel.
- Orange starts with Windows by default. Change keys and more in Settings.

Install and fix

- Run `Orange-setup.exe`. Windows 10/11, no extra setup.
- SmartScreen warning? Choose **More info**, then **Run anyway**.
- Wheel not showing? Check Orange is in the tray, then try again.
- Word and PowerPoint files need LibreOffice (Settings, Install).
